

# St. Louis Blues at Chicago Blackhawks

NHL | Regular | October 6, 2026 | 20:00 Toronto

|                |                                       |
|----------------|---------------------------------------|
| Status         | EXPERIMENTAL RESEARCH - NOT VALIDATED |
| Inputs checked | Oct 06, 2026, 12:22 PM Toronto        |

## Simulation results

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| Scenario win shares   | St. Louis Blues 52.2%<br>Chicago Blackhawks 47.8%                                                        |
| Average sampled score | St. Louis Blues 3.0 - Chicago Blackhawks 2.9                                                             |
| Sampled total         | Mean 6.0; middle 80% of sampled totals 3-9                                                               |
| Run details           | 100,000 completed trials   seed 3996954722<br>Raw tied-score scenarios 16.2%; assumed 50/50 winner split |

## Historical inputs

|                    |                                                                                                                            |
|--------------------|----------------------------------------------------------------------------------------------------------------------------|
| St. Louis Blues    | 84 completed regular-season games; 43 at this venue role. Last 5: 4 wins, scored 23, conceded 17. Latest input 2026-10-04. |
| Chicago Blackhawks | 85 completed regular-season games; 41 at this venue role. Last 5: 1 wins, scored 11, conceded 22. Latest input 2026-10-03. |

## Matchup takeaway

|                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| St. Louis Blues has the higher scenario share (52.2%), but this is close to even. The model has no validated predictive accuracy and these figures are not betting edges. Prior-season results contribute heavily; roster and confirmed-goalie changes are not modeled. |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Method, limits & sources

Venue scoring/conceding samples estimate score rates and variation. Independent negative-binomial draws (Poisson where variance is lower) produce score scenarios. Historical overtime/shootout scores are included; this is not a regulation-goal model. No player, injury, rest, opponent-strength or weather adjustment.

Monte Carlo sampling error about +/- 0.31 percentage points (95%). This measures repeat-run noise ONLY, not real-world confidence or model accuracy. Player props and market edges unavailable.
