Method, limits & sources

Venue scoring/conceding samples estimate score rates and variation. Independent negative-binomial draws (Poisson where variance is lower) produce score scenarios. Historical overtime/shootout scores are included; this is not a regulation-goal model. No player, injury, rest, opponent-strength or weather adjustment.

Monte Carlo sampling error about +/- 0.31 percentage points (95%). This measures repeat-run noise ONLY, not real-world confidence or model accuracy. Player props and market edges unavailable.
